## CANNABINOID &amp; POTENCY PROFILE

## Assay and batch detail

Cannabinoid	Result (% w/w, dry basis)
Total THC	28%
Δ <sup>9</sup> -THC (free)	1.26%
Total CBD	<1%
CBD (free)	<0.10%
CBGA	0.84%

Potency figures are the finished-batch assay; individual cannabinoid rows are from the batch Certificate of Analysis. Dashes/LOR values indicate results below the laboratory reporting limit. Source: accredited laboratory CoA for batch B1803.

## TERPENE DETAIL

## Top terpenes, aroma and source

Terpene	% w/w	Character	Notes
Terpinolene	1.50%	Floral-herbal, smoky citrus	Common in tea tree, sage, nutmeg; often elevated in sativa-classified chemotypes.
Caryophyllene	0.48%	Peppery, warm spice, woody	Δ-caryophyllene — the only dietary terpene with confirmed CB2 binding; abundant in black pepper and clove.
beta-Ocimene	0.35%	Sweet herbal, warm woody	Present in mint, parsley, tarragon and some orchids.
Myrcene	0.33%	Earthy, musk, clove	Most abundant terpene in many Cannabis chemotypes; also found in hops, lemongrass and thyme.
alpha-Humulene	0.21%	Hoppy, earthy, dry herbal	Shares a biosynthetic origin with caryophyllene; principal hop terpene.

## PRESCRIBING CONTEXT

## Clinical considerations

## Commonly patient-reported experiences

Patients prescribed high-THC dried flower chemotypes commonly self-report relaxation, anxiolysis, altered perception of pain, appetite stimulation, dry mouth, and short-term cognitive/psychomotor changes. Vaporisation onset is minutes; peak 10–30 min; duration 2–4 h. Response varies with dose, technique, concurrent medicines and tolerance.

## Access pathway

Unapproved therapeutic good — **Category 5** medicinal cannabis product not entered on the ARTG. Supplied under the TGA Special Access Scheme (SAS-B) or by an Authorised Prescriber (AP) pathway. Schedule 8 — prescribing, storage and record-keeping per state controlled-drug law. In Queensland, dispensing requires Regulation 61 approval.

## Initiation and titration

Cannabis-naïve patients: one low-dose inhalation (0.5–10 mg product), wait 15 min to assess. Titrate by symptom, tolerability and duration. Counsel against combustion; use a medical-grade vapouriser.

## Interactions and cautions

THC is metabolised via CYP3A4 and CYP2C9 — interaction potential with strong CYP inducers/inhibitors, azoles, macrolides, valproate, warfarin, SSRIs. Use caution with personal/family history of psychosis, severe CVD, pregnancy/breastfeeding, adolescence, and concurrent CNS depressants.

**Driving and impairment — QLD zero-tolerance.** THC is detectable in oral fluid and blood for hours to days after use. Queensland enforces a zero-tolerance roadside test for active THC under the Transport Operations (Road Use Management) Act 1995. Counsel all patients not to drive or operate machinery while using this medicine.

## PRODUCT DETAILS

<b>Dosage form</b>	Dried cannabis flower	<b>Batch</b>	B1803
<b>Route</b>	Vaporisation (inhalation)	<b>Manufactured</b>	December 2025
<b>Pack size</b>	10 g (minimum net)	<b>Expiry</b>	December 2026
<b>Storage</b>	Store below 25 °C. Protect from light. Keep out of reach and sight of children.	<b>Compliance</b>	Manufactured in accordance with TGO 93 and Ph. Eur. 5.1.4
