## CANNABINOID &amp; POTENCY PROFILE

## Assay and batch detail

Cannabinoid	Result (% w/w, dry basis)
Total CBD	<1%
Total THC	25%
CBGA	1.00%
CBG	0.20%

Potency figures are the finished-batch assay; individual cannabinoid rows are from the batch Certificate of Analysis. Dashes/LOR values indicate results below the laboratory reporting limit. Source: accredited laboratory CoA for batch B1596.

## TERPENE DETAIL

## Top terpenes, aroma and source

Terpene	% w/w	Character	Notes
Myrcene	1.30%	Earthy, musk, clove	Most abundant terpene in many Cannabis chemotypes; also found in hops, lemongrass and thyme.
Caryophyllene	0.76%	Peppery, warm spice, woody	□-caryophyllene — the only dietary terpene with confirmed CB2 binding; abundant in black pepper and clove.
alpha-Humulene	0.33%	Hoppy, earthy, dry herbal	Shares a biosynthetic origin with caryophyllene; principal hop terpene.
Limonene	0.31%	Citrus, bright, sweet	Found in citrus peel oil; one of the most common terpenes across food and botanical extracts.
Linalool	0.18%	Floral, lavender, soft herbal	Predominant floral note in lavender, coriander and basil essential oils.

## PRESCRIBING CONTEXT

## Clinical considerations

## Commonly patient-reported experiences

Patients prescribed high-THC dried flower chemotypes commonly self-report relaxation, anxiolysis, altered perception of pain, appetite stimulation, dry mouth, and short-term cognitive/psychomotor changes. Vaporisation onset is minutes; peak 10–30 min; duration 2–4 h. Response varies with dose, technique, concurrent medicines and tolerance.

## Access pathway

Unapproved therapeutic good — **Category 5** medicinal cannabis product not entered on the ARTG. Supplied under the TGA Special Access Scheme (SAS-B) or by an Authorised Prescriber (AP) pathway. Schedule 8 — prescribing, storage and record-keeping per state controlled-drug law. In Queensland, dispensing requires Regulation 61 approval.

## Initiation and titration

Cannabis-naïve patients: one low-dose inhalation (□5–10 mg product), wait 15 min to assess. Titrate by symptom, tolerability and duration. Counsel against combustion; use a medical-grade vaporiser.

## Interactions and cautions

THC is metabolised via CYP3A4 and CYP2C9 — interaction potential with strong CYP inducers/inhibitors, azoles, macrolides, valproate, warfarin, SSRIs. Use caution with personal/family history of psychosis, severe CVD, pregnancy/breastfeeding, adolescence, and concurrent CNS depressants.

**Driving and impairment — QLD zero-tolerance.** THC is detectable in oral fluid and blood for hours to days after use. Queensland enforces a zero-tolerance roadside test for active THC under the Transport Operations (Road Use Management) Act 1995. Counsel all patients not to drive or operate machinery while using this medicine.

## PRODUCT DETAILS

<b>Dosage form</b>	Dried cannabis flower	<b>Batch</b>	B1596
<b>Route</b>	Vaporisation (inhalation)	<b>Manufactured</b>	October 2025
<b>Pack size</b>	30 g (minimum net)	<b>Expiry</b>	October 2026
<b>Storage</b>	Store below 25 °C. Protect from light. Keep out of reach and sight of children.	<b>Compliance</b>	Manufactured in accordance with TGO 93 and Ph. Eur. 5.1.4
